## PIPE CONVEYOR BELT

本公司成立於民國三十五年，是台灣工業萌芽時期，台灣橡膠帶的製造先驅；也是台灣首家取得品質保證制度ISO 9002和環境管理系統ISO 14001認證的橡膠帶製造廠。

「三五管狀輸送橡膠帶」是十數年前，本公司基於環境保護的迫切改進需要，集結人力創製推出符合環保要求的產品。其呈管性、密閉性、搬運效率、耐久性等性能優異，廣泛應用在電廠、煉油廠、水泥廠、鋼鐵廠及其他對環境清潔及空氣品質嚴格要求的領域。

A forerunner of manufacturing Rubber Belt, San Wu Rubber Mfg. Co., Ltd., was founded in Taiwan at the year of 1946, the time when Taiwan began its industrial development. Today in Taiwan San Wu also is the first rubber belt factory who owns both the certificates of "ISO 9002 Quality Guarantee System" & "ISO 14001 Environmental Management System".

To meet the urgent need of the environmental protection, we devoted much & developed, ten years ago, a special product, San Wu Pipe Conveyor Belt, with excellent features of piping shape, closed, good transporting efficiency & durability. Nowadays, this new type of belt already is widely used in those who need clean environment critically, such as Power Station, Oil-Refinery Mill, Cement Factory & Steel Mill etc.

### 一、構造 Structure

## 二、特點 Characteristics

相對於一般傳統的輸送橡膠帶，管狀輸送橡膠帶具有下列優點

Compared with conventional belts, it owns many advantages:

- 採密閉輸送方式，載物不會散出或掉落，不致造成環境污染。

Closed transportation and no danger of scattering or dropping will be happened to pollute surroundings.

- 可防止外來物滲入，確保載物的純度。

None of foreign objects will be mixed into the contents.

- 回程時仍呈管狀，載物若掉落亦不會粘附在橡膠帶表面上，不會損傷橡膠帶的表面。

While returning, belt will keep in a closed profile. If any contents fall down, it would not glue or damage to the surface of the belt.

- 可以曲線路徑輸送（最大45度），能簡化輸送系統，大量減少輸送機台配置的空間（傳統的輸送橡膠帶只能採用直線輸送方式，轉折時須佔用甚多額外空間）。

A transportation in a winding path is possible (max.45 degree), which could simplify the conveyor system and reduce much space compared with a conventional belt that can only be run straight.

- 輸送時呈管狀，可增加輸送物和內面膠間的摩擦力，爬坡搬運能力達30度，比一般輸送帶的20度強50%，有助於縮短輸送線的長度，降低設備成本。

During transportation, the friction between contents and inner cover rubber could be increased which make the belt to convey inclined up to 30 degree compared with 20 degree of a conventional belt. This could be a great help to lessen belt length and save cost.

### ■ 適當帶面轉換距離 (L)

Transition Distance

$$L \geq \text{Diameter} \times 25$$

### ■ 適當曲率半徑 (R)
